

State	Recipient	Project Description
AL	University of South Alabama (USA)	USA, along with their partners in the Consortium for Rural Alabama Water and Wastewater, will develop innovative, cost-effective, and sustainable solutions to chronic wastewater problems in three counties of the AL Black Belt. This four-year project will identify potential decentralized cluster locations, recommend appropriate collection and treatment technologies, perform preliminary engineering design, create an innovative rural wastewater pilot testing facility, develop community-specific affordability metrics and management models, conduct an annual symposium/workshop and support an ongoing successful pilot program in unincorporated areas of an additional county.
