Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Paul Bridgewater

Lauren,

If RUS were to schedule a second public hearing, what would be the time frame for this meeting?

Thanks,

Doug

Jot and Doug,

RUS has received a request to conduct another hearing on the Draft EIS. RUS leadership has asked that I provide an estimate on this effort. When free, do you mind drafting a quick quote (does not have to be official) that includes Louis Berger personnel, facility fees, newspaper notifications, and Spanish/English transcription. If readily available, do you also mind providing an estimate for simultaneous translation services on a hourly basis. The sooner you can provide this info, the better.

Thanks,

Lauren McGee Rayburn

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Amber MacPherson

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

tony moore

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Audrey Clark

Subject: Deny Energy Answers" Waste Incinerator
Date: Friday, October 09, 2015 11:01:30 AM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

Subject: Deny Energy Answers" Waste Incinerator
Date: Friday, October 09, 2015 10:44:18 AM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

steve putrich

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Jan Kampa

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Sue Horwood

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. Subject: Deny Energy Answers" Waste Incinerator
Date: Friday, October 09, 2015 9:14:59 AM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Alexander Gaya

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

Subject: Deny Energy Answers" Waste Incinerator
Date: Friday, October 09, 2015 7:50:48 AM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Meryl Pinque

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Elisabeth Richter

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Simon Thomas

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

Subject: Deny Energy Answers" Waste Incinerator
Date: Friday, October 09, 2015 5:33:30 AM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Ida Melin

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Douglas McMillan

The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Rochelle Wood

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Natasha Chelpanova

USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Steve De Cock

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Katharina Beckord

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Subject: Deny Energy Answers" Waste Incinerator
Date: Friday, October 09, 2015 2:01:36 AM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Andreas Vlasiadis

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Michaela Roessner-Herman

The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. Subject: Deny Energy Answers" Waste Incinerator
Date: Friday, October 09, 2015 12:53:00 AM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Eric Campbell

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Olga Grushko

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Mary Sheffield

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 11:29:32 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Jeannine Moore

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Doris Applebaum

Subject: Please Deny Energy Answers' Waste Incinerator
Date: Thursday, October 08, 2015 11:00:06 PM

Dear Lauren McGee Rayburn,

It's the 21st century, so why is this horrifically anti-environmental project even being considered? Sucking up water from PR's largest wetland and then returning it full of toxins and chemicals is NOT the answer to PR's garbage problem. Endangered wildlife won't last long if they're having to drink this contaminated water and the people will be breathing in the toxic ash. This sounds like something out of the last century. Time to find green solutions to their garbage problems. An incinerator will solve nothing and just create more problems.

Therefore, I urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Diana Smith

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Laura Ackerman

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

William Sherman

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 10:20:07 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Jan Thomas

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Kenneth Bickel

Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Thursday, October 08, 2015 10:08:20 PM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Vivaina Cruzado

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Jordan Tucker

USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Melissa Allen

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Pete Klosterman

Dear Lauren McGee Rayburn,

I urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge, as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, which include the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human well-being in an area already violating the Clean Air Act's standards. Instead the USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 9:13:56 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Richard Solomon

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Jose A. Colon-Lopez

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Jennifer Tisdell

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 8:32:56 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Hunter Klapperich

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Jennifer Harris

The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Cecilia Gonzalez

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 8:14:06 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Katie Zukoski

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dale Sloat

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Michael Terry

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Sharon Russick

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 7:47:03 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Patricia Curtis

Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 7:45:42 PM

Dear Lauren McGee Rayburn,

I MOST DEFINITELY urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

It is OUTRAGEOUS to even consider that the new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland. This is bad enough! But then the proposal is to return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury!!

What's more, the environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards.

The USDA should be setting good examples: support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

DJ Wagner
