I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Robert Wisehart

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Lorna Wallach

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

William Navran

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. Date: Thursday, October 08, 2015 3:00:02 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Suzanne Hamer

USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Erin Barca

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Jacqueline Bobnick

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dianne Ensign

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Eva Sandhammar

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 2:47:22 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Norman Howell

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Monique TONET

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Cathy Brownlee

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 2:37:52 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

E Robbins

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Jim Snee

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Crystal Wolf

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Darlene Banks

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 2:28:05 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Rita Gentry

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

L. Parrish

The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Jim Notestine

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Tika Bordelon

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Adam Hopkins

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

P Scoville

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Thursday, October 08, 2015 2:11:52 PM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Tom Hicks

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Kelsey Baker

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 1:47:38 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Thursday, October 08, 2015 12:13:36 PM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Nahyla Figueroa

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Thursday, October 08, 2015 7:03:05 AM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Jose F. Maldonado-Moll

Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Thursday, October 08, 2015 6:29:11 AM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Jose Menendez

Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 6:27:44 AM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

yolanda schultes

Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Wednesday, October 07, 2015 8:25:35 PM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Victor Vivoni

Subject: Deny Energy Answers" Waste Incinerator
Date: Wednesday, October 07, 2015 7:37:37 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Marisol Rodriguez

Subject: Rechaza la quema txica de residuos
Date: Tuesday, October 06, 2015 4:04:46 PM

Dear Ms. Lauren McGee-Rayburn,

Los incineradores de residuos son notoriamente contaminantes; a travs de emisiones de aire y la produccin de cenizas residuales los incineradores propagan mercurio, plomo, dioxinas, cadmio, gases cidos, dixido de carbono, partculas de materias y otras emisiones perjudiciales.

El rea de Arecibo ya sufre de la contaminacin de una planta de recuperacin de plomo de bateras y la masiva incineradores solo aportara a los problemas de salud de estas comunidades. Existen soluciones de basura cero para el manejo de residuos en Puerto Rico, pero la incineracin no es una de ellas.

En adicin, Puerto Rico est en el momento sufriendo de una sequa extrema y el requerimiento de dos millones de galones diarios de agua para el mantenimiento de la incineradora sera agregar estresores en el recurso agua de la isla.

El "Rural Utility Service Agency" no debe financiar estas facilidades contaminantes. Rechacen el "Environmental Impact Statement" para la solicitud del prstamo de la incineradora de "Energy Answers" en Arecibo, Puerto Rico.

Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 29, 2015 4:18:08 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Lynette Tudorache

Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 29, 2015 6:25:12 AM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Susan Lathrop

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Helen Cochems

The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Steven Barry

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Date: Thursday, October 22, 2015 10:15:45 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Edward O'Connor

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Asphodel Denning

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Kimberly Wiley

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Subject: Deny Energy Answers" Waste Incinerator
Date: Tuesday, October 20, 2015 4:02:51 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Pamela Breitwater

USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Naomi Hood

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste will not make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. Subject: Deny Energy Answers" Waste Incinerator
Date: Saturday, October 17, 2015 3:47:52 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Mary Jane Gibson

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Margaret Keene

Subject: New Supervisor, Post-Loan Servicing Operations Branch, OPMRA

To All,

It is my pleasure to announce Ms. Cheryl Munnelyn as the new supervisor of the Post-Loan Servicing Financial Operations Branch in the Office of Portfolio Management and Risk Assessment, to be effective November 15, 2015.

Cheryl began her career with the Rural Utilities Service in the Power Supply Division as a Senior Loan Specialist in September 2004, where she worked with many of our G&T and power supply borrowers across the country. Cheryl was an original member of the Bridge Building Team that provided many Cultural Transformation activities for the Electric Program. She also served as Team Leader as well as completed several rotations as Acting Financial Operations Branch Chief. In October 2014, as a part of the Electric Program reorganization, Cheryl was assigned to the Office of Policy, Outreach and Standards as a Loan Specialist, and also served as Acting Policy and Outreach Branch Chief for several months.

Cheryl has over 20 years of financial and customer service experience. She previously held positions as both Senior Mortgage Underwriter and Mortgage Consultant for the Pentagon Federal Credit Union, a not-for-profit financial institution.

Cheryl holds a Bachelor of Science Degree from the University of Maryland as well as

multiple Certifications from Mortgage Bankers of America. She currently resides in Upper Marlboro, MD, with her husband Les of 28 years and their daughter Ashley, who some may remember was a Summer Intern with RUS and USDA for a number of years.

Please join me in congratulating Cheryl and wishing her all the best in her new position.

Dear Ms. Lauren McGee-Rayburn,

Los incineradores de residuos son notoriamente contaminantes; a travÃ©s de emisiones de aire y la producci3n de cenizas residuales los incineradores propagan mercurio, plomo, dioxinas, cadmio, gases cidos, di3xido de carbono, partculas de materias y otras emisiones perjudiciales.

El rea de Arecibo ya sufre de la contaminaci3n de una planta de recuperaci3n de plomo de bateras y la masiva incineradores solo aportara a los problemas de salud de estas comunidades. Existen soluciones de basura cero para el manejo de residuos en Puerto Rico, pero la incineraci3n no es una de ellas.

En adici3n, Puerto Rico est en el momento sufriendo de una sequa extrema y el requerimiento de dos millones de galones diarios de agua para el mantenimiento de la incineradora sera agregar estresores en el recurso agua de la isla.

El "Rural Utility Service Agency" no debe financiar estas facilidades contaminantes. Rechacen el "Environmental Impact Statement" para la solicitud del prstamo de la incineradora de "Energy Answers" en Arecibo, Puerto Rico.

Dear Ms. Lauren McGee-Rayburn,

Los incineradores de residuos son notoriamente contaminantes; a travÃ©s de emisiones de aire y la producci3n de cenizas residuales los incineradores propagan mercurio, plomo, dioxinas, cadmio, gases 1cidos, di3xido de carbono, partÃ­culas de materias y otras emisiones perjudiciales.

El 1rea de Arecibo ya sufre de la contaminaci3n de una planta de recuperaci3n de plomo de baterÃ­as y la masiva incineradores solo aportarÃ­a a los problemas de salud de estas comunidades. Existen soluciones de basura cero para el manejo de residuos en Puerto Rico, pero la incineraci3n no es una de ellas.

En adici3n, Puerto Rico est1 en el momento sufriendo de una sequÃ­a extrema y el requerimiento de dos millones de galones diarios de agua para el mantenimiento de la incineradora serÃ­a agregar estresores en el recurso agua de la isla.

El "Rural Utility Service Agency" no debe financiar estas facilidades contaminantes. Rechacen el "Environmental Impact Statement" para la solicitud del prÃ©stamo de la incineradora de "Energy Answers" en Arecibo, Puerto Rico.

Sincerely,

Hector Reillo

Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Wednesday, October 28, 2015 7:14:43 PM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Beatriz Medina

There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Ana Soto

Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Thursday, October 22, 2015 8:59:41 PM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.
