Subject: Deny Energy Answers" Waste Incinerator
Date: Friday, October 30, 2015 5:26:42 AM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Sandra Stanley

Estimada senora McGee:

Me opongo a que su agencia le autorice financiamiento a un incinerador porque:

El incinerador que la empresa "Energy Answers" planea construir en Arceibo representa un Amenorzo directo a la salud. No solo por la exposición de nanopartículas y gases tóxicos sino que fomenta el consumo de basura y no fomenta el reciclaje. Además existe alto grado de oposición y no tiene una planificación integrada y realista de los problemas de Basura y acanoso de la misma, entre otros problemas.

Atentamente,

Jaime Jordán García

Estimada senora McGee:

Me opongo a que su agencia le autorice financiamiento a un incinerador porque:

The incinerator would jeopardize the health of citizens nearby and it is unnecessary. Recycling is minimal and composting is not practiced either; both would greatly reduce waste. Your institution would be wiser and more effective if it provided funds for composting and recycling and education instead of incineration by a private company. Please consider our concerns.

RE: Comentarios al Borrador Declaración de Impacto Ambiental Federal Energy Answer Arecibo

Estimada Sra. Rayburn:

Sirva la presente para expresar mi sentir relativo a la presentación del Borrador de la Declaración de Impacto Ambiental realizada por el Rural Utilities Service, relacionada a la construcción de una planta de Conversión de Basura a Energía propuesta por Energy answer para Arecibo Puerto Rico.

Los arecibeños hemos tenido la oportunidad de examinar este proyecto en múltiples oportunidades a través de las más de 20 vistas públicas celebradas en nuestra comunidad. En estas ocasiones hemos presentado ya sea oral o por escrito nuestras inquietudes que entedemos han sido evaluadas, contestadas y aquellas con méritos y datos adjudicadas, prueba de ello son los permisos otorgados.

Arecibo enfrenta una verdadera crisis de manejo de desperdicios y Puerto Rico también necesita viabilizar infraestructura de generación eléctrica a precios razonables, ayudando a mejorar nuestra competitividad en el ámbito económico.

Veo la entrada de la Empresa Energy Answers como un paso en la dirección de mejorar sustancialmente nuestra infraestructura y por consiguiente abaratar los costos de producción.

El generará miles de empleos en la fase de construcción, aportará recursos al Municipio mediante impuestos. De esta forma, ayudará a solucionar los dos principales problemas ambientales que enfrenta Puerto Rico.

Como empresario de Benitez Insurance Agency de Arecibo, les solicito den paso a la Declaración de Impacto Ambiental, convirtiendo el borrador en la DIA final y dando paso a la petición de Energy Answer de apoyo financiero para empezar la construcción del proyecto.

Todos en Arecibo estaremos muy agradecidos y veremos el inicio del renacer económico de Arecibo y la región.

Atentamente,

Angel M. Benitez

RE: Environmental Impact Statement/Energy Answers-Arecibo

Dear Ms. Rayburn:

My name is José Antonio Maldonado Nieves I am Merchant by profession and currently serve as President of the Municipal Legislature in the Municipality of Arecibo. The Municipal Legislature is the broad and representative body of the constituents of Arecibo and we are elected in the general election every four years. For the past six years we have seen the development of an initiative to establish a Waste to Energy (Resources Recovery and Alternate Electricity Generation Plant) in our municipality. This project has been the subject of 22 public hearings where our citizens have had unprecedented opportunity get their questions answered and address any concerns about the operation of a project of this scale.

In the past this Municipal Legislature acted very responsibly and constituted a special independent commission that analyzed the project, including a visit to see the sister plant in Rochester Massachusetts and eventually endorsed its construction in Arecibo by means of a Resolution and signing a Host Communal Agreement, documents that is in full force.

I hereby make it clear that this City Council looks favorably the establishment of this plant in Arecibo, we are pleased with the environmental analysis

conducted so far, and including the recent carried out by RUS and understand that citizen participation has been extensive. On the other hand we call your attention to groups foreign to our town who would usurp the representativeness of the citizens of Arecibo.

That is why we request from you a positive determination on the Environmental Impact Statement prepared and eventually the funding request by the project proponents.

Sincerely,

José A. Maldonado Nieves
President
Municipal Legislature Arecibo
Municipality of Arecibo

RE: Energy Answers Arecibo, Puerto Rico
Laren.McGee@wdc.usda.gov

Estimada señora Mc Gee Rayburn:

Reciba un cordial saludo y deseos de éxito en todas sus funciones. Desde antes de asumir la dirección del gobierno municipal, estuve al tanto de la propuesta para construir una facilidad de conversión de basura en energía por parte de la firma Energy Answers y expresé públicamente mi respaldo a esa iniciativa. Igualmente, el proyecto recibió el respaldo de la Legislatura Municipal, mediante la aprobación de la Resolución Núm. 45 del 14 de diciembre de 2010, lo que incluyó vistas públicas en la Legislatura Municipal y el envío de una Comisión Especial de la Legislatura Municipal a visitar la facilidad de Referencia (SEMASS) en Massachusetts.

He analizado este proyecto detenidamente y entiendo que el mismo será de gran beneficio para el pueblo de Arecibo y de la región en general. Me he mantenido al tanto de los procesos de vistas públicas en los trámites de permisos y he observado como cada una de las inquietudes traídas por sectores opositores han sido contestadas por las agencias con capacidad técnica y legal para así hacerlo. El documento ambiental preparado por el RUS confirma la seguridad de este proyecto al ambiente, la gente y la actividad agrícola de la región.

El proyecto propuesto significará llevar infraestructura moderna para la generación de energía a precios bajos y contribuirá a atender el problema de disposición de desperdicios que hoy día se considera el problema ambiental más serio que enfrenta Puerto Rico. Nuestra Isla produce diariamente aproximadamente unas 9,000 toneladas de desperdicios y apenas un 10% se separa para fines de reciclaje lo que deja un amplio espacio para la viabilidad del proyecto de Energy Answers el cual manejará por disposición de los permisos y el diseño,

Arecibo... Una ciudad que crece.

unas 2,100 toneladas. Lo anterior en completa armonía con las políticas públicas de la EPA y del Gobierno de Puerto Rico para el manejo integral de la basura.

Con este proyecto se habilitará infraestructura que cumple con la reglamentación federal y local, permitiendo el cierre paulatino de los vertederos que no cumplen ambientalmente y que hoy día comprometen los recursos de agua y los terrenos con potencial agrícola.

Quiero igualmente dejar establecido en el record del proceso de comentarios públicos de la Declaración de Impacto Ambiental Preliminar preparada por el RUS, que personas ajenas a nuestro Municipio de Arecibo intentan abrogarse la representatividad de todo el pueblo y hablan sin autoridad moral o legal a nombre de los arecibeños.

Los residentes de Arecibo se han expresado a favor de este proyecto en comentarios escritos, en los medios de comunicación y con su presencia, participando en Ferias de Empleo celebradas en lugares públicos del Municipio. El record público de este proceso así lo demuestra, a pesar de las tácticas intimidatorias que ejercen unos pequeños grupos ajenos a nuestra comunidad Arecibo y que se mueven de proyecto en proyecto objetando cada iniciativa de desarrollo económico que se propone.

Por lo anterior, expreso mi respaldo favorable del proyecto antes mencionado, respaldo que ha sido validado por los acuerdos de comunidad anfitriona y avalado por la Legislatura Municipal, el cuerpo más amplio de representatividad de los residentes.

Finalmente, les exhorto a darle paso al apoyo financiero solicitado por los proponentes de este proyecto el cual será de gran impacto para Arecibo y la región y nos permitirá convertirnos nuevamente en el eje de desarrollo económico y agrícola que fuimos en el pasado.

CORDIALMENTE,

HON. CARLOS MOLINA RODRÍGUEZ

ALCALDE

Re: DIA Federal Energy Answers-Arecibo

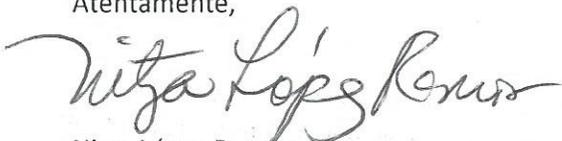

Estimada Sra. Rayburn

Por la presente hago constar que soy Trabajadora Social y resido en Arecibo. He estado al tanto del Proyecto de Conversión de Basura en Energía propuesto por la empresa Energy Answers para nuestro pueblo. Este Proyecto ha sido avalado por la inmensa mayoría de los arecibeños. Así, ha quedado demostrado en las vistas públicas que han celebrado las agencias federales y estatales. Todos los argumentos a favor o en contra de esta iniciativa han sido analizados y evaluados por las agencias competentes que han otorgado los permisos finales para que se construya esta planta.

Los aspectos relevantes han sido nuevamente examinados en la Declaración de Impacto Ambiental y considerados por el RUS que aseguran cuidadosamente los impactos ambientales del Proyecto. Como conoedora de los problemas sociales de nuestro pueblo acojo la experiencia y determinación de las instituciones federales y estatales. Esto representa un estímulo económico y social para el desarrollo de nuestra ciudad, mediante la creación de empleos directos e indirectos. Además, nos liberamos de la contaminación ambiental que genera el vertedero y de las demandas incoadas en los tribunales federales por razones de salud.

Entiendo que el Proyecto propuesto por Energy Answers no tan solo le resuelve el problema de desperdicios sólidos a los arecibeños sino que a nivel regional. Para fortalecer nuestra economía y el desarrollo social de nuestro pueblo es importante que se apruebe lo más pronto posible el financiamiento para la construcción de esta empresa.

Atentamente,

Nitza López Ramos

Re: DIA Federal Energy Answers-Arecibo

Estimada Sra. Rayburn

Para su conocimiento, soy residente y comerciante de Arecibo. Me he enterado por diferentes medios del Proyecto de Conversión de Basura en Energía que ha propuesto por la Empresa Energy Answers para la ciudad de Arecibo. Esta iniciativa fue sometida a vistas públicas y ha recibido el endoso mayoritario de los comerciantes que lo vemos como una alternativa para la disposición de desperdicios sólidos ante la situación actual de los vertederos que no están cumpliendo con los requerimientos federales y que en algún momento podrían ser cerrados. Me uno a las miles de voces que reclaman la construcción de esta planta para mitigar la contaminación ambiental de vertederos y evitar demandas ante los tribunales federales.

De acuerdo con los permisos otorgados por las agencias federales y estatales, el Proyecto cumple con todos los requerimientos ambientales por lo que entiendo que no debe haber reparo a la solicitud de apoyo financiero sometida por Energy Answers ante el RUS. Tomando en cuenta que los aspectos relevantes fueron examinados nuevamente en la Declaración de Impacto Ambiental y traídos ante la consideración del RUS que aseguran una descripción cuidadosa de los impactos ambientales del Proyecto. Como comerciante y ciudadana responsable, exhorto a darle paso al apoyo financiero solicitado por los proponentes de esta empresa.

La construcción de esta planta no tan solo le dará impulso a la economía de nuestro pueblo mediante la creación de empleos sino que propiciará el establecimiento de otras facilidades comerciales en la periferia e impactará desarrollo económico de la región de Arecibo. Aspirando lo mejor para mi familia y para todos los arecibeños y con la esperanza que se conceda el apoyo financiero, quedo

RE: Environmental Impact Statement/Energy Answers - Arecibo

Estimada señora Mc Gee Rayburn:

Me dirijo a ustedes en calidad de ex-representante a la Cámara de Representantes de Puerto Rico, ex-presidente de la Legislatura Municipal del Municipio de Arecibo y actualmente Oficial de Enlace entre el Municipio de Arecibo, la firma Energy Answers y la comunidad. Conozco la propuesta para la construcción de una facilidad para de conversión de basura en energía en Arecibo desde que se hizo su primera presentación ante la Legislatura Municipal de Arecibo en el año 2010. En esta ocasión tuvimos el beneficio de hacer preguntas y aclarar detalles sobre la operación de la planta y su impacto en la salud y el ambiente. Luego de evaluar la propuesta sometida por la firma Energy Answers, con alto sentido de responsabilidad enviamos una delegación de legisladores para examinar en detalle las particularidades operacionales de la planta construida por la empresa en Rochester Massachusetts. El cuerpo de legisladores municipales recomendó el endoso a la misma quedando plasmado en un acuerdo escrito llamado "Acuerdo de Comunidad Anfitriona" que Energy Answers está poniendo en vigor y cumpliendo a cabalidad.

Como parte de un largo proceso de orientación e información serio y responsable através de charlas, foros y vistas públicas ha quedado demostrado que el proyecto cumple con toda la reglamentación de las agencias con competencia y no constituye una amenaza ni a la salud de los ciudadanos de Arecibo ni al ambiente como alegan los que siempre se oponen al progreso de nuestro pueblo sin fundamento alguno.

Por otro lado, esta facilidad sustituiría el vertedero de Arecibo el que no cumple con la reglamentación federal ni estatal por lo que se vislumbra podría ser cerrado y nos crearía un grave problema de disposición de desperdicios. Esta operación está causando enfermedades y demandas en los tribunales federales por parte de los vecinos. El proyecto de Energy Answers cuenta con una infraestructura de cumplimiento ambiental que reducirá la producción de gases de calentamiento al evitar la producción de metano y atenderá los problemas reales de contaminación en los vertederos en armonía con la política pública de la EPA y del Gobierno de Puerto Rico para el manejo integral de la basura. Las reducciones de gases de calentamiento

que la planta producirá está alineada con las políticas del Administración del Presidente Obama quien ha impuesto nuevas reglas para reducir las emisiones del gas metano producto de la operación de vertederos.

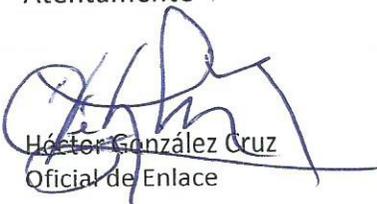

Mi parecer es que ha quedado demostrado en los foros federales y locales el apoyo mayoritario de la gente que reside en Arecibo a esta iniciativa propuesta por Energy Answers. Este respaldo se ha evidenciado con miles de firmas entregadas a las agencias competentes y al propio gobernador de Puerto Rico. Miles de personas han dejado ver su interés de ser reclutados en las ferias de empleo, actividades que personalmente he monitoreado como parte de mis deberes como enlace comunitario.

Con la implantación de este Proyecto se generarán cientos de empleos tanto en la fase de construcción como operacional. Además, se generará más actividad económica como parte del desarrollo económico de nuestro pueblo.

Es importante tomar en cuenta que los argumentos presentados por los que se oponen y los que respaldamos el proyecto fueron escuchados, estudiados y evaluados científicamente por las agencias federales y locales. Luego emitieron una determinación otorgando los permisos requeridos. Lamentablemente, los opositores como en ocasiones anteriores no aceptan las determinaciones ambientales por lo que recurren como último recurso a realizar piquetes y otras actividades concertadas encaminadas a entorpecer la asistencia financiera del RUS.

Confianto en que la razón no grita, la razón convence y que la voluntad de la mayoría de los arecibeños que ha sido expresada en las vistas públicas y en otros foros puede más que la desinformación de unos pocos, esperamos que se convierta el borrador en una DIA final y se encamine la asistencia financiera del RUS. **Ahora es que Arecibo necesita este proyecto como instrumento para impulsar nuestra economía y mejorar nuestro desarrollo.**

Atentamente

RE: Comentarios al Borrador Declaración de Impacto Ambiental Federal Energy Answer Arecibo

Estimada Sra. Rayburn:

Sirva la presente para expresar mi sentir relativo a la presentación del Borrador de la Declaración de Impacto Ambiental realizada por el Rural Utilities Service, relacionada a la construcción de una planta de Conversión de Basura a Energía propuesta por Energy answer para Arecibo Puerto Rico.

Los arecibeños hemos tenido la oportunidad de examinar este proyecto en múltiples oportunidades a través de las más de 20 vistas públicas celebradas en nuestra comunidad. En estas ocasiones hemos presentado ya sea oral o por escrito nuestras inquietudes que entedemos han sido evaluadas, contestadas y aquellas con méritos y datos adjudicadas, prueba de ello son los permisos otorgados.

Arecibo enfrenta una verdadera crisis de manejo de desperdicios y Puerto Rico también necesita viabilizar infraestructura de generación eléctrica a precios razonables, ayudando a mejorar nuestra competitividad en el ámbito económico.

Veo la entrada de la Empresa Energy Answers como un paso en la dirección de mejorar sustancialmente nuestra infraestructura y por consiguiente abaratar los costos de producción.

El generará miles de empleos en la fase de construcción, aportará recursos al Municipio mediante impuestos. De esta forma, ayudará a solucionar los dos principales problemas ambientales que enfrenta Puerto Rico.

Como comerciante y activo representante de la clase empresarial de Arecibo, les solicito den paso a la Declaración de Impacto Ambiental, convirtiendo el borrador en la DIA final y dando paso a la petición de Energy Answer de apoyo financiero para empezar la construcción del proyecto.

Todos en Arecibo estaremos muy agradecidos y veremos el inicio del renacer económico de Arecibo y la región.

Atentamente,

Miguel "Teddy" Ramos

RE: Environmental Impact Statement / Energy Answers - Arecibo

Dear Mrs. Mc Gee Rayburn:

I am writing to you as a former representative to the House of Representatives of Puerto Rico, former president of the Municipal Assembly of the Municipality of Arecibo and currently, Liaison Officer between the Municipality of Arecibo, Energy Answers and the community. I know the proposal for the construction of a Waste to Energy facility in Arecibo since the proponents made its first presentation to the Municipal Legislature of Arecibo in 2010, when I was his president. At the time, we had the benefit of asking questions and clarify details regarding the plant operation and its potential impacts on health and the environment. After evaluating the proposal submitted by the firm Energy Answers, with a high sense of responsibility as lawmakers we sent a delegation to examine in detail the operational characteristics of the plant built by the company in Rochester Massachusetts. The municipal lawmakers recommended the endorsement of the project in a written agreement called "Host Community Agreement" that Energy Answers is putting in place and fully complying.

As part of an extensive information and orientation process, thru lectures, participation in forums and public hearings it has been demonstrated that the project meets all the regulatory requirements from the agencies with jurisdiction and expertise, and do not pose a threat to the health of the citizens of Arecibo or the environment, as claimed by those who always oppose the progress of our people without any basis.

On the other hand, this facility would replace the Arecibo landfill, facility that does not comply with federal or state regulations and its closure would create a serious waste disposal problem in Arecibo and the Region. The landfill operation is causing illness and lawsuits in the Federal District Court of Puerto Rico by the neighboring residents. The proposed project has an infrastructure in environmental compliance, will reduce greenhouse gases by avoiding methane production and will address the real problems of pollution in landfills, in harmony with EPA's public policy as well as the Government of Puerto Rico's policy for integrated waste management. The greenhouse gas reductions that the plant will produce is aligned with the policies of the Obama's Administration who recently has imposed new rules to reduce emissions of methane gas, a result of landfills operations.

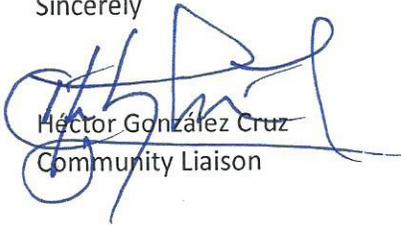

It is my judgment, that it has been proven both in federal and local forums, a massive support from the people living in Arecibo to this proposed initiative by Energy Answers. This support has been evidenced with thousands of signatures submitted to the competent agencies and the governor of Puerto Rico itself. Thousands of people has demonstrated, in job fairs and other public events their interest in being recruited in the project, activities that I personally monitor as part of my duties as a community liaison.

With the implementation of this project hundreds of jobs will be generate both during construction and during the operational phase. Furthermore, more economic activity will be produced for our people.

It is important to be sure, that the arguments presented by those who oppose and those who endorse the project were heard, studied and scientifically assessed by federal and local agencies. Then they issued a determination granting the required permits. Unfortunately, as in the past, opponents do not accept the environmental determinations so they turn as a last resort to make pickets and other concerted activities to hinder financial assistance from RUS.

Confident that the reason does not cry, the reason convince, and that the will of the majority of Arecibo that has been expressed in public hearings and other forums, can do more than the disinformation of the few, we hope that the draft EIS will become final and financial assistance from RUS is approved. It is now that Arecibo needs this project as a tool to boost our economy and improve our development.

Sincerely

Héctor González Cruz
Community Liaison

Re: DIA Federal Energy Answers-Arecibo

Estimada Sra. Rayburn:

Por la presente hago constar que soy residente de Arecibo y estoy jubilado de la Policía de Puerto Rico con el rango de Capitán. Tengo conocimiento de todas las vistas públicas y he participado en reuniones con la comunidad referente a la construcción de la Planta que propone Energy Answers en Arecibo. Este Proyecto cuenta con el endoso mayoritario de los arecibeños y con los permisos requeridos por las agencias federales y estatales.

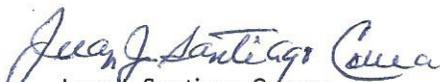

El pasado 20 de agosto de 2015, el RUS llevó a cabo una vista de financiamiento en el Arecibo Country Club y fueron traídos ante su consideración los temas examinados una vez más en la Declaración de Impacto Ambiental que asegura una descripción cuidadosa de los potenciales impactos ambientales del Proyecto.

Por otro lado, los informes de la EPA y de la Junta de Calidad Ambiental revelan que el vertedero de Arecibo no cumple con los requerimientos para la disposición de desperdicios sólidos y que en algún momento podría ser cerrado por representar una amenaza para la salud ambiental de nuestro pueblo. Los vecinos más cercanos han presentado demandas en los tribunales federales por motivos de la contaminación que afecta su calidad de vida. La alternativa viable para solucionar la situación del vertedero es la construcción de la Planta de Conversión de Basura en Energía propuesta por la empresa Energy Answers. Aparte de resolver los problemas ambientales que ocasiona el vertedero, crea empleos directos e indirectos en su etapa de construcción como de operación. Además, crea más actividad económica en la periferia y en los demás pueblos de la región.

Como exoficial de la Policía de Puerto Rico que conozco el parecer de la gente seria y responsable de nuestra ciudad, recomiendo se apruebe la solicitud de apoyo financiero prupuesto por Energy Answers.

Atentamente,

Subject: Deny Energy Answers" Waste Incinerator
Date: Friday, October 16, 2015 4:24:33 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Nicholas Schaper

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 15, 2015 7:47:43 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

debra poscharscky

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Thursday, October 15, 2015 4:47:13 AM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Samuel Valdez

Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Wednesday, October 14, 2015 10:19:01 PM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Zacha Ortiz Correa

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Barb Travis

Subject: Deny Energy Answers" Waste Incinerator
Date: Wednesday, October 14, 2015 2:44:37 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Date: Wednesday, October 14, 2015 1:40:28 PM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Cristina Galan

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Wednesday, October 14, 2015 10:10:47 AM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Subject: Deny Energy Answers" Waste Incinerator
Date: Wednesday, October 14, 2015 10:01:49 AM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

DD Gamble

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Steven Cook

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Ana María Valencia

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. Subject: Deny Energy Answers" Waste Incinerator
Date: Tuesday, October 13, 2015 8:05:40 AM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Subject: Deny Energy Answers" Waste Incinerator
Date: Tuesday, October 13, 2015 3:08:26 AM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Rosa Vocino

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Phyllis Chavez

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Elizabeth Bossert

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Tracy Zickur

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Monday, October 12, 2015 11:38:34 AM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

Subject: Deny Energy Answers" Waste Incinerator
Date: Sunday, October 11, 2015 11:09:51 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Jennifer formoso

Dear Lauren McGee Rayburn,

the ignorance of men is the enemy of mama nature
why is it that the most educated people commit the worst crimes against nature and humanity?
men has turn earth into a painful place for all living beings...when you do wrong nothing goes unpunished
Stop the war against the environment by men
I blame you for being cruel

Subject: Rechaza la quema tÃ©xica de residuos
Date: Sunday, October 11, 2015 9:15:58 PM

Dear Ms. Lauren McGee-Rayburn,

Los incineradores de residuos son notoriamente contaminantes; a travÃ©s de emisiones de aire y la producci3n de cenizas residuales los incineradores propagan mercurio, plomo, dioxinas, cadmio, gases cidos, di3xido de carbono, partculas de materias y otras emisiones perjudiciales.

El rea de Arecibo ya sufre de la contaminaci3n de una planta de recuperaci3n de plomo de bateras y la masiva incineradores solo aportara a los problemas de salud de estas comunidades. Existen soluciones de basura cero para el manejo de residuos en Puerto Rico, pero la incineraci3n no es una de ellas.

En adici3n, Puerto Rico est en el momento sufriendo de una sequa extrema y el requerimiento de dos millones de galones diarios de agua para el mantenimiento de la incineradora sera agregar estresores en el recurso agua de la isla.

El "Rural Utility Service Agency" no debe financiar estas facilidades contaminantes. Rechacen el "Environmental Impact Statement" para la solicitud del prstamo de la incineradora de "Energy Answers" en Arecibo, Puerto Rico.

Sincerely,

Segundo Melendez

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Sandy Stuhaan

The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Patricia Brech

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. Dear Lauren McGee Rayburn,

We are writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The U.S. Department of Agriculture is considering subsidizing a massive incinerator that would burn more than 700,000 tons of trash per year and pollute Caño Tiburones -- Puerto Rico's largest wetland and a biodiversity hotspot.

But let there be no mistake: Burning city waste won't make problems disappear. The incinerator would release dangerous chemicals -- including dioxins, furans, lead and mercury -- into the surrounding air, soil and water. And the area's local residents and 21 federally protected species will be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications.

Take action -- tell the USDA we should be supporting green technology, not burning trash piles. The agency must deny this proposal, which would threaten the health of Puerto Rico's people and wildlife.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Franca Bontacchio

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

ON K0K2G0

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. Date: Sunday, October 11, 2015 11:51:13 AM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Douglas Rosenthal

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Jan Mitchell

Subject: Deny Energy Answers" Waste Incinerator
Date: Sunday, October 11, 2015 12:12:29 AM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service must not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. The USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The news that I have read about Puerto Rico's environmental degradation over the past 30 years is truly spirit-breaking. That is the country where I grew up. I can remember the pristine state of its wetlands. I can remember the Disneyland - magic of its wildlife. Birds, frogs, insects of every size and color. A true paradise. And it's been sold out. This is not just tragic. It's immoral.

And now the government wants the people to fund a new incinerator that would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones.

Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

When will you stop supporting these short-term solutions that destroy irreplaceable natural treasures?

Sincerely,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Deborah Hoffmann

Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Saturday, October 10, 2015 10:21:00 PM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Jim Crotty

A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Craig Soule

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Gary Boren

USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Saturday, October 10, 2015 4:03:05 PM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Sondra Vega

Subject: Deny Energy Answers" Waste Incinerator
Date: Saturday, October 10, 2015 2:54:03 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Karen Wolf

USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Carole Mathews

Subject: Rechaza la quema txica de residuos
Date: Saturday, October 10, 2015 12:23:31 PM

Dear Ms. Lauren McGee-Rayburn,

Los incineradores de residuos son notoriamente contaminantes; a travs de emisiones de aire y la produccin de cenizas residuales los incineradores propagan mercurio, plomo, dioxinas, cadmio, gases cidos, dixido de carbono, partculas de materias y otras emisiones perjudiciales.

El rea de Arecibo ya sufre de la contaminacin de una planta de recuperacin de plomo de bateras y la masiva incineradores solo aportara a los problemas de salud de estas comunidades. Existen soluciones de basura cero para el manejo de residuos en Puerto Rico, pero la incineracin no es una de ellas.

En adicin, Puerto Rico est en el momento sufriendo de una sequa extrema y el requerimiento de dos millones de galones diarios de agua para el mantenimiento de la incineradora sera agregar estresores en el recurso agua de la isla.

El "Rural Utility Service Agency" no debe financiar estas facilidades contaminantes. Rechacen el "Environmental Impact Statement" para la solicitud del prstamo de la incineradora de "Energy Answers" en Arecibo, Puerto Rico.

Sincerely,

Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Saturday, October 10, 2015 10:57:17 AM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Matt Maras

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Mariangela Monterisi

USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Chris frost

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Nora Sotomayor

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

Subject: Deny Energy Answers" Waste Incinerator
Date: Saturday, October 10, 2015 4:30:37 AM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Sandra Ferri

Subject: Deny Energy Answers" Waste Incinerator
Date: Saturday, October 10, 2015 4:24:53 AM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Corrina Parker

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Kaci Caldwell

Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Saturday, October 10, 2015 12:37:54 AM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Tara Huber

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Anne Davies

USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Simon Holledge

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Linette Schreiber

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. Subject: Deny Energy Answers" Waste Incinerator
Date: Friday, October 09, 2015 8:04:27 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Donna Brown

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Kobe Wade

Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Friday, October 09, 2015 7:08:45 PM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Milagros Conde

Subject: Deny Energy Answers" Waste Incinerator
Date: Friday, October 09, 2015 6:41:24 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Kobe Wade

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Elaine Erickson

The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Mehak Ratan

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. Subject: Deny Energy Answers" Waste Incinerator
Date: Friday, October 09, 2015 4:41:46 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Mary A Leon

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Eric & Cedra Spragett

Subject: Please Deny Energy Answers" Waste Incinerator
Date: Friday, October 09, 2015 3:14:52 PM

Dear Lauren McGee Rayburn,

Please reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. Subject: Deny Energy Answers" Waste Incinerator
Date: Friday, October 09, 2015 2:11:37 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

John Limbach

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Sudhir Pandi

The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Kathleen Medina

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Heidi Myers
