Date: Thursday, October 08, 2015 7:38:40 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

amy fisher

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Sheila Dillon

The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Benjamin Lashbaugh

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 7:16:33 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

James Trujillo

USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Maribeth Chadwell

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Colleen Cleary

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Frances Sonne

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Jason Steadmon

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. Subject: Deny Energy Answers" Waste Incinerator - it is a pollution generator of the worst sort
Date: Thursday, October 08, 2015 6:23:18 PM

Dear Lauren McGee Rayburn,

I urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, destroying Puerto Rico's largest wetland. The water will produce polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

Burning tons of city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture. This plan is a disaster in the making. Please cancel it.

Sincerely,

Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Janet Herbruck

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 6:13:22 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Mark Molloy

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Linda Allan

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dorothy & Davis Peticolas

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Alexandra Becker

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 5:48:19 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Greg Rupert

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Susanne Burtis

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Subject: Please Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 5:29:56 PM

Dear Lauren McGee Rayburn,

Please reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico.

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems.

USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury.

The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones.

Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species.

A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service definitely must be done.

The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards.

USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Thank you. We are counting on you.

Sincerely,

greg and laurie schwaller

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Carol Thompson

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. Dear Lauren McGee Rayburn,

I am writing to urge you to REJECT Federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture / DOA's Rural Utilities Service should not set a precedent of supporting environmentally DESTRUCTIVE projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects providing more jobs and putting Puerto Rico on a fast track for a healthier future, like increased RECYCLING and COMPOSTING services for residents and businesses.

The new incinerator would draw more than 2,000,000 gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as POLLUTED discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review FAILED to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of drop off trucks and proposed floodplain modifications.

The environmental assessment did NOT address those problems nor their impacts on the area's 21 federally protected species, including Puerto Rican parrots, leather back sea turtles and hawks bill sea turtles. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service / FWS and National Marine Fisheries Service was NEVER done.

In short, burning city waste will NOT make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human well being in an area already violating the Clean Air Act's standards. USDA should support SUSTAINABLE solutions, require consideration of NON-incineration alternatives and not spend taxpayer dollars on this POLLUTING for-profit venture.

Sincerely,

Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 5:10:44 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Eric Pincepoche

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

heather cross

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Stephanie Farrar

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Thursday, October 08, 2015 4:58:51 PM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Miguel Otero

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Nahid Varjavand

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico.

This proposal is an extremely bad idea!!!

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Sheryl Rose

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

Recology, the company that handles the garbage and recycling for Cupertino, California, and other San Francisco Bay Area cities, is a model for recycling and composting with a minimal amount going to garbage. With global warming being fed by burning materials that emit carbon into the atmosphere, it is imperative that we find ways to decrease carbon emissions. Rather than burning garbage, it makes sense to promote efforts to recycle and re-use materials, which includes developing avenues for "Freecycling" items that others may be interested in using. For example, a family may replace an old but working microwave oven with a new one. Rather than taking up room in a landfill, another family may be delighted to receive the used oven. The Freecycle network in our area allows people to make Offer and Wanted postings for free items within the community. When an Offered or Wanted item is picked up, a Taken or Received posting is made. This process of sharing and reusing diverts items from the landfill and promotes community!

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Kevin Hughes

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Vanessa Carbia

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Rich Moser

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 4:35:03 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Tony Lentini

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Keti Pjevic

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

jr s

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 4:21:04 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Shirley Bayless

The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Frances Goff

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Heather Loeffelman

USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Patricia Rodgers

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. Subject: Message from Deputy Administrator Cohen
Date: Thursday, October 08, 2015 3:57:19 PM

Dear Colleagues,

I wanted to take a moment to introduce myself as the new Deputy Administrator of the Rural Utilities Service.

I am thrilled to be part of an agency that creates such a positive, meaningful impact in the lives of millions of Americans. I am a lifelong resident of Annapolis, Maryland but spent summers working the fields of my grandparents' blueberry farm in southwestern rural Michigan. Those experiences instilled in me a deep affection and respect for the hardworking and down-to-earth people and communities of rural America.

Since starting at RUS on Monday I have been learning as much as I can about our program areas. I am impressed by the caliber and commitment of our team here, and feel privileged to be part of it. Thank you for your dedication and the quality work you do.

My professional background is in executive management and administration at the state and local levels of government. My wife Lesley is a nurse, and we have two daughters ages 11 and 7. I am a diehard Baltimore Ravens fan, and am fulfilling my sacrosanct duty to raise our girls as Ravens fans as well.

If we haven't met yet, I look forward to meeting you soon. My office is directly across the hall from Administrator McBride's on the Fifth Floor of the South Building in D.C. If you are in the area please stop in and introduce yourself.

Best regards,

Josh

Joshua J. Cohen

Deputy Administrator

Rural Utilities Service

U.S. Department of Agriculture

Dear Lauren McGee Rayburn,

I am writing to strongly urge you to REJECT federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human well-being in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Thank you for your consideration.

Sincerely,

Moraima Suarez

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Gudrun Dennis

Subject: Reject the Arecibo waste incinerator EIS for loan application
Date: Thursday, October 08, 2015 3:48:15 PM

Dear Ms. Lauren McGee-Rayburn,

Waste incinerators are notoriously dirty; through their air and ash pollution, waste incinerators spread mercury, lead, dioxins, arsenic, cadmium, acid gas, carbon dioxide, particulate matter, and many other harmful emissions.

The area around Arecibo is already suffering as a result of high lead levels from existing manufacturing and waste (battery) recycling facilities, and the addition of a massive solid waste incinerator would only add to the burden of these communities. There are better ways for Puerto Rico to address its solid waste issues, but incineration is not one of them.

In addition, Puerto Rico is currently suffering a severe and sustained drought and the required two million gallons of water needed daily to operate this facility would only further stress the island's water resources.

The Rural Utility Services Agency should not be in the business of financing these polluting facilities. Please reject Energy Answers' Environmental Impact Statement for a loan application for the proposed waste incinerator in Arecibo, Puerto Rico.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Bruce Calvert

USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Paulette Doulatshahi

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 3:33:03 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Kathleen Welsh

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Joanne Popp

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Nancy Archibald

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Forest Shomer

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 3:21:27 PM

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Jane Luu

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Ilse Burch

Subject: Please Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 3:17:44 PM

Dear Lauren McGee Rayburn,

It is with great concern that I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not be allowed to set a precedent of supporting and encouraging environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve (please consider that number, 2 million gallons per day), Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. This is absolutely unacceptable. The environmental review has failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. All of this is simply, absolutely unacceptable. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done. I'm not sure about the legality of that fact, but it seems that it would be in violation of at least policy if not law.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture. And I don't mean to tell you what you already know, but this situation is very serious and needs to be corrected now before it's too late! Thank you for your attention to this matter.

Sincerely,

Krissa Schandelmaier

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Don Rubin

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. Subject: Deny Energy Answers" Waste Incinerator
Date: Thursday, October 08, 2015 3:12:24 PM

Dear Lauren McGee Rayburn,

I urge you to REJECT federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico.

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones.

Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle.

*A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

Burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards.

USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Ronald Clayton

The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Grace Padelford

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones. Nearby wildlife will also be harmed by the plant's blow-away trash, 24/7 operations, 400 daily tons of toxic ash, thousands of dropoff trucks and proposed floodplain modifications. The environmental assessment did not address these problems or their impacts on the area's 21 federally protected species, including the Puerto Rican parrot, leatherback sea turtle and hawksbill sea turtle. A formal Endangered Species Act consultation with the U.S. Fish and Wildlife Service and National Marine Fisheries Service was never done.

In short, burning city waste won't make the area's problems disappear. The incinerator would cause significant environmental harms and threaten human wellbeing in an area already violating the Clean Air Act's standards. USDA should support sustainable solutions, require the consideration of non-incineration alternatives, and not spend taxpayer dollars on this polluting, for-profit venture.

Sincerely,

Janice Speed

Dear Lauren McGee Rayburn,

I am writing to urge you to reject federal funding for Energy Answers' proposed waste incinerator in Arecibo, Puerto Rico. The U.S. Department of Agriculture's Rural Utilities Service should not set a precedent of supporting environmentally destructive projects when there are cleaner and greener ways to deal with Puerto Rico's waste-disposal problems. USDA should instead encourage projects that provide more jobs and put Puerto Rico on track for a healthier future, such as increased recycling and composting services for residents and businesses.

The new incinerator would draw more than 2 million gallons of water each day from the Caño Tiburones nature reserve, Puerto Rico's largest wetland, and return the water as polluted discharge and steam containing dangerous chemicals such as dioxins, furans and mercury. The environmental review failed to examine the precise locations of this discharge as well as the harms from air-pollution fallout on Caño Tiburones.
